AIM OF THE ADVANCED RESEARCH WORKSHOP

The aim of the workshop is to show where we stand in terms of diagnostic tools for the detection of bacterial, viral and fungal/parasitic infections that may have major prevalence and relevance in civilians as well as in people involved in military actions.

In fact it is very easy to contaminate foods and water thus causing a great emergency.

The terrorists know that it is possible to reveal some military attacks, but it is less easy to detect infective contamination. Radioactive contamination are easy to detect, chemicals change some characteristics like flavour or taste easily detectable.

Infective agents are more insidious because they do not apparently change any characteristics and cannot be detected by any physical instruments.

The workshop will be therefore mainly dedicated to methods for detecting infective agents which may be applied on large scale and quickly they are able to reveal their presence. A particular emphasis will be given to the biotechnological aspects of this research (i.e. molecular biology) for a punctual and timely analysis of the progression of these diseases.

Basically, the workshop will be divided in 3 sections:
1) more frequent bacterial infections,
2) viral infections with particular attention to the viral hepatitis,
3) fungi and parasites, with a specially attention paid to plasmobia.

The invited speakers, world-wide known experts in the respective fields, will present the most up-dated outcome of their ongoing efforts in different research centers.

Epidemiology, biology, pathogenesis, and diagnosis via biotechnological methods, in particular, as well as clinical aspects will be the covered aspects of each disease examined. A special emphasis will be given to techniques useful to a screen procedure applicable to a large scale the population.

1st day OPENING WORDS Mariapia Viola Magni

Goals of workshop: The use of biotechnology for rapid and accurate diagnostic tests

BIOTERRORISM PREVENTION coordinated by Albert Marinculic

09.00-11.00 Bioterrorism: a possible weapons for terrorist attack through food and water contamination by Vincenzo Costigliola

11.30-12.30 SPM- based approaches towards integrated, portable, nano-biochips by Levi A. Gheber

14.00-16.00 Biosensor by Rossica Becheva
Production of biopharmaceuticals by mammalian cell fermentation by Dethard Muller

16.00-17.00 Discrimination between infectious and non-infectious disease states by transcriptomics by Karem Felsmann

2nd day BACTERIA DIAGNOSTIC TESTS coordinated by Constantine Arvanitakis

09.00-11.00 Novel approaches to microbial taxonomy using information from whole-genome sequencing projects by Tom Coenye

Quick tube-a multiplex PCR-based method for rapid microbiological testing by Stephan Rußwurm
Molecular methods to detect *Bacillus cereus* and *B. thuringiensis* in foods by Marisa Manzano

11.00-13.00 DNA diagnostic of micro organisms by Steven Lory and Peter Sebo
Taxonomy and identification of Bacteria by Tom Coyne
Evaluation of different methods to eliminate Listeria monocytogenes from dry cured ham by Giuseppe Comi

14.00-16.00 Escherichia coli tests by Brigitte Carpenter Salmonella enteric infections by Constantine Arvanitakis
Molecular diagnostics of pathogenic Staphylococci by Jiri Doskar

16.00-17.00 Genetic diversity of Enterococcus faecium isolated from Brynda cheese by Jurai Krakovich
Microarray technology in infection diagnosis by Mojca Narat

3rd day VIRAL INFECTIONS coordinated by Robert Marks

09.00-11.00 Monoclonal antibodies against HIV infections by Gabriela Stigler

Epidemiology and diagnosis of hepatitis B in the Mediterranean Region by Nurdan Tozun

11.00-13.00 Avian flu by Mojca Narat
HEV (an emerging pathogen) interactions with the host intestinal tract by Avrelija Cencic

15.00-17.00 Fiber- optic immunosensors to viral pathogens by Robert Marks

4th day PARASITES AND FUNGI coordinated by Fabrizio Bruschi

09.00-11.00 Infective forms of parasites in food :human embedded in ecosystem by Eduardo Dei-Cas

Parasites – induced neoplasia by Colette Creusy

Development of attenuated blood stage malaria parasite model in Plasmodium berghei by Andrea Crisanti

11.00-13.00 Mechanism of innate immunological response in animals infected with parasitic nematode *T. Spiralis* by Vojtek Elzbieta Valaytis Rhode

Immunomodulation induced by helminthis: towards a new strategies for treatment of immune-mediated diseases? by Fabrizio Bruschi

Inhibition of mast cell activation by the filarial nematode product ES-62 by William Harnett

15.00-17.00 Advances in blood fluke immunobiology and their implications for the diagnosis and therapy of schistosomiasis Stephen J. Davies

Improved separation of bacterial and fungal DNA by Pureprobe by Marc Lehman

Rapid quantification and identification of airbone pathogens(including Aspergillus) using solid phase cytometry by Tom Coenye

17.00-18.00 Conclusion by Vincenzo Costigliola

Epidemiology and diagnosis of hepatitis B in the Mediterranean Region by Nurdan Tozun

11.00-13.00 Avian flu by Mojca Narat

HEV (an emerging pathogen) interactions with the host intestinal tract by Avrelija Cencic

15.00-17.00 Fiber- optic immunosensors to viral pathogens by Robert Marks

4th day PARASITES AND FUNGI coordinated by Fabrizio Bruschi

09.00-11.00 Infective forms of parasites in food :human embedded in ecosystem by Eduardo Dei-Cas

Parasites – induced neoplasia by Colette Creusy

Development of attenuated blood stage malaria parasite model in *Plasmodium berghei* by Andrea Crisanti

11.00-13.00 Mechanism of innate immunological response in animals infected with parasitic nematode *T. Spiralis* by Vojtek Elzbieta Valaytis Rhode

Immunomodulation induced by helminths: towards a new strategies for treatment of immune-mediated diseases? by Fabrizio Bruschi
Inhibition of mast cell activation by the filarial nematode product ES-62 by William Harnett

15.00-17.00 Advances in blood fluke immunobiology and their implications for the diagnosis and therapy of schistosomiasis Stephen J. Davies

Improved separation of bacterial and fungal DNA by Pureprobe by Marc Lehman

Rapid quantification and identification of airborne pathogens(including Aspergillus) using solid phase cytometry by Tom Coenye

17.00-18.00 Conclusion by Vincenzo Costigliola

ORATORI

Prof. Arvanitakis C. Aristotle University of Thessaloniki, Fourth Department of Medicine, Hippocration General Hospital, GR

Prof. Betcheva R. University of Chemical Technology and Metallurgy, BG

Prof. Bruschi F. Dipartimento di Patologia Sperimentale, B.M.I.E. Scuola Medica, Università di Pisa, IT

Dr. Carpentier B. AFSSA - Agence Française de Sécurité Sanitaire des Aliments, FR

Prof. Cencic A. Department of Microbiology, Biochemistry, Biotechnology, University of Maribor, SI

Prof. Coenye T. Laboratorium voor Farmaceutische Microbiologie, Universiteit Gent, BE

Prof. Comi G. Department of Food Science, University of Udine, IT

Dr. Costigliola V. European Medical Association "EMA", Brussels, BE

Prof. Creusy C. Anatomie et Cytologie Pathologiques, Institut Catholique de Lille/ Hôpital St. Vincent, FR

Prof. Crisanti A. Dipartimento di Medicina Sperimentale e Scienze Biochimiche, Sezione di Microbiologia, Università degli Studi di Perugia, IT

Prof. Dei-Cas E. Lille-2 University Faculty of Medicine & Lille Pasteur Institute, FR

Prof. Davies S. J. Uniformed Services University of the Health Sciences, Department of Microbiology and Immunology Bethesda, USA

Prof. Doskar J. Masaryk University, Faculty of Science, Department of Experimental Biology, CZ

Dr. Felsmann K. SIRS-Lab GmbH, DE

Prof. Gheber L. A. Department of Biotechnology Engineering, Ben-Gurion University of the Negev, IS

Prof. Harnett W. Strathclyde Institute of Pharmacy and Biomedical Sciences, University of Strathclyde, Glasgow, UK

Prof. Krajeovic J. Institute of Cell Biology, Faculty of Natural Sciences, Comenius University, Bratislava, SK

Dr. Lehmann M. SIRS-Lab GmbH, DE

Prof. Lory S. Harvard, Boston, USA

Prof. Marks R. Ben-Gurion University of the Negev, IS

Prof. Manzano M. Dipartimento di Scienze degli Alimenti, Università degli Studi di Udine, IT

Dr. Müller D. University of Natural Resources and Applied Life Sciences, Institute of Applied Microbiology, AT

Prof. Narat M. University of Ljubljana, Biotechnical Faculty, SI

Dr. Rußwurm S. SIRS-Lab GmbH, DE

Dr. Sebo P. Institute of Microbiology, Prague, CZ

Dr. Stiegler G. University of Natural Resources and Applied Life Sciences, Institute of Applied Microbiology, AT

Prof. Tozun N. Marmara University Hospital, TR

Prof. Viola-Magni M. Dipartimento di Medicina Clinica e Sperimentale, Sezione di Fisiopatologia, Università di Perugia, IT

Prof. Walajtys-Rode E. Rzeszow University of Technology, Faculty of Chemistry, Chair of Biochemistry and Biotechnology, PL
